

Dihydropyrimidines And Uses Thereof

Abstract of the Disclosure

5        This invention is directed to dihydropyrimidines which  
are selective antagonists for human  $\alpha_{1a}$  receptors. This  
invention is also related to uses of these compounds  
for relaxing lower urinary tract tissue, treating  
benign prostatic hyperplasia and for the treatment of  
10      any disease where the antagonism of the  $\alpha_{1a}$  receptor may  
be useful.        The invention further provides a  
pharmaceutical composition comprising a therapeutically  
effective amount of the above-defined compounds and a  
pharmaceutically acceptable carrier.
